Project volume: approx. 400.000€

Project time: 2015 - 2017

Project description: Delivery and installation of various server configurations for use in especially modern and powerful data center infrastructures.

Project realization: The infrastructure was upgraded in 2015 - 2017 in several stages by the addition of 150 additional 1P/2P and 4P servers, Blade Architectures and networking topologies. Additional upgrades will be planned around this.
